

PHISHING URL SECURITY AUDIT REPORT

CONFIDENTIAL

REF: PG-AUDIT-00348

Executive Cybersecurity Risk Assessment & Explainable AI (XAI) Diagnostic Audit

1. REPORT INFORMATION

Report Title:	Phishing URL Security Audit Report	Scan Reference ID:	#348 (PG-SCAN-00348)
Audit Date & Time:	August 20, 2026 at 15:39:42 UTC	Target Domain:	www.google.com
Analyzed URL:	https://www.google.com/search?q=cybersecurity	ML Model:	Random Forest + XAI

2. FINAL VERDICT

■ VERIFIED LEGITIMATE / SAFE

RISK LEVEL: SAFE

Structural parameters and security heuristics align with legitimate internet standards. No malicious deception indicators found.

PREDICTION LEGITIMATE	RISK LEVEL SAFE	CONFIDENCE 96.0%	PHISHING PROB. 4.0%	LEGITIMATE PROB. 96.0%
--------------------------	--------------------	---------------------	------------------------	---------------------------

3. URL SECURITY ANALYSIS

Security Characteristic	Observed Value / Diagnostic Status	Security Characteristic	Observed Value / Diagnostic Status
HTTPS Encryption	Yes (Valid TLS / SSL)	Domain Name	www.google.com
URL Length	45 characters (Normal)	Domain Length	14 characters
Number of Subdomains	0 level(s)	Suspicious Keywords	None detected
IP Address Usage	No (Standard DNS Host)	Suspicious Structure	No (Canonical URL Structure)
TLD Abuse Rating	10% Risk (Standard TLD)	Shannon Entropy	4.32 bits (High Randomness / Obfuscated)

4. WHY THIS RESULT WAS GIVEN

- **Secure Transport & Encryption:** Operates over authentic HTTPS protocol with valid transport encryption.
- **Canonical Domain Architecture:** Structure conforms to standard web hierarchy without deceptive subdomain stacking.
- **Clean Lexical Composition:** Zero deceptive authentication tokens, phishing keywords, or redirect tricks detected.
- **Balanced Character Entropy:** Character randomness matches legitimate brand naming conventions.
- **Standard Registry Standing:** Domain is registered under a trusted, established Top-Level Domain.

5. EXPLAINABLE AI SUMMARY (SHAP & LIME)

Explainable AI mathematically attributes how individual URL characteristics pushed the machine learning model toward **Phishing (+Risk)** or **Legitimate (-Risk)**:

Ran k	Influential Feature	Observed Value	Risk Impact Direction	Diagnostic Influence Summary
#1	Suspicious Keywords Count	0	-Risk (Pushed Safe)	Contributed -0.173 weight to prediction
#2	TLD Risk Factor	0.1	-Risk (Pushed Safe)	Contributed -0.158 weight to prediction
#3	Subdomain Count	0	+Risk (Pushed Phishing)	Contributed +0.081 weight to prediction
#4	HTTPS Protocol	1	-Risk (Pushed Safe)	Contributed -0.059 weight to prediction
#5	URL Length	45	-Risk (Pushed Safe)	Contributed -0.027 weight to prediction

6. SECURITY RECOMMENDATIONS

■■ SAFE BROWSING & OPERATIONAL DIRECTIVES

- The URL appears legitimate according to current analysis: Structural and heuristic markers align with safe web standards.
- Continue using normal safe-browsing practices: Always confirm valid HTTPS lock indicators before authenticating.
- Do not enter sensitive information unless the domain is verified: Ensure you intentionally navigated to this specific destination.

7. SHORT SECURITY SUMMARY

Target URL:	https://www.google.com/search?q=cybersecurity	Risk Level:	SAFE
Final Verdict:	LEGITIMATE	Confidence:	96.0% (Phishing: 4.0%)
Main Reason:	Clean lexical profile, verified HTTPS transport, and valid domain hierarchy.	Recommended Action:	PROCEED SAFELY with standard browsing vigilance.
