

PHISHING URL SECURITY AUDIT REPORT

SECURITY AUDIT
REF: PG-AUDIT-00361

Executive Cybersecurity Risk Assessment & Explainable AI (XAI) Diagnostic Audit

1. REPORT INFORMATION

Report Title:	Phishing URL Security Audit Report	Scan ID:	#361 (PG-SCAN-00361)
Date and Time:	August 20, 2026 at 15:57:14 UTC	Domain:	www.github.com
Analyzed URL:	https://www.github.com	Model Engine:	Random Forest (XAI Calibrated)

2. FINAL VERDICT

■ VERIFIED LEGITIMATE / SAFE RISK LEVEL: LOW

Structural parameters and security heuristics align with legitimate internet standards. No malicious deception indicators found.

PREDICTION LEGITIMATE	RISK LEVEL LOW	CONFIDENCE SCORE 100.0%	PHISHING PROB. 0.0%	LEGITIMATE PROB. 100.0%
--------------------------	-------------------	----------------------------	------------------------	----------------------------

3. URL SECURITY ANALYSIS

Security Characteristic	Diagnostic Status	Security Characteristic	Diagnostic Status
HTTPS	Yes (Valid TLS / SSL)	Domain	www.github.com
URL Length	22 characters (Normal)	Domain Length	14 characters
Number of Subdomains	0 level(s)	Suspicious Keywords	None detected
IP Address Usage	No (DNS Host)	Suspicious URL Structure	No (Canonical Structure)
TLD Abuse Rating	10% Risk (Standard TLD)	Shannon Entropy	3.75 bits (Normal Pattern)

4. WHY THIS RESULT WAS GIVEN

Main Factors Influencing Decision (5 Detected):

- **Secure HTTPS Encryption:** Operates over encrypted HTTPS protocol with standard transport security.
- **Canonical Domain Structure:** Clean domain hierarchy without deceptive subdomain stacking or hyphenated combosquatting.
- **No Suspicious Keywords:** Zero credential theft, spoofing, or authentication bait keywords detected.
- **Standard URL Characteristics:** Balanced character entropy and standard lexical length aligning with verified legitimate web domains.
- **Established Top-Level Domain:** Registered under a reputable, standard Top-Level Domain with standard DNS infrastructure.

5. EXPLAINABLE AI SUMMARY

Concise mathematical summary of the top 3–5 features from Explainable AI (SHAP & LIME) influencing the model's decision:

Rank	Influential Feature	Observed Value	Risk Impact Direction	Short Impact Explanation
#1	TLD Risk Factor	0.1	-Risk (Pushed Safe)	Reputation risk index based on Top-Level Domain registry abuse statistics.
#2	Suspicious Keywords Count	0	-Risk (Pushed Safe)	Occurrences of deceptive credential/financial phishing keywords.
#3	Subdomain Count	0	+Risk (Pushed Phishing)	Number of subdomains nested before root domain.
#4	Path Length	0	-Risk (Pushed Safe)	Length of the directory and query path.
#5	Question Mark Count	0	-Risk (Pushed Safe)	Number of '?' denoting query parameter strings.

6. SECURITY RECOMMENDATION

■■ SAFE BROWSING DIRECTIVES (LOW RISK / LEGITIMATE DETECTED)

- The URL appears legitimate according to the current analysis: Structural, heuristic, and XAI indicators match safe web patterns.
- Continue using normal safe-browsing practices: Always confirm valid HTTPS lock indicators before logging in.
- Do not enter sensitive information unless the domain is verified: Ensure you intentionally navigated to this authentic destination.

7. SHORT SECURITY SUMMARY

URL:	https://www.github.com	Risk:	LOW
Verdict:	LEGITIMATE	Confidence:	100.0% (Phishing: 0.0%)
Main Reason:	Clean lexical structure, verified HTTPS encryption, and standard domain hierarchy.	Recommended Action:	PROCEED SAFELY with standard browsing vigilance.
