

PHISHING URL SECURITY AUDIT REPORT

Executive Cybersecurity Risk Assessment & Explainable AI (XAI) Diagnostic Audit

1. REPORT INFORMATION

Report Title:	Phishing URL Security Audit Report	Scan ID:	#367 (PG-SCAN-00367)
Date and Time:	August 20, 2026 at 16:21:53 UTC	Domain:	www.google.com
Analyzed URL:	https://www.google.com/search?q=cybersecurity	Model Engine:	Random Forest (XAI Calibrated)

2. FINAL VERDICT

■■ VERIFIED LEGITIMATE / SAFE				RISK LEVEL: LOW
Structural parameters and security heuristics align with legitimate internet standards. No malicious deception indicators found.				
PREDICTION LEGITIMATE	RISK LEVEL LOW	CONFIDENCE SCORE 99.9%	PHISHING PROB. 0.1%	LEGITIMATE PROB. 99.9%

3. URL SECURITY ANALYSIS

Security Characteristic	Diagnostic Status	Security Characteristic	Diagnostic Status
HTTPS	Yes (Valid TLS / SSL)	Domain	www.google.com
URL Length	45 characters (Normal)	Domain Length	14 characters
Number of Subdomains	0 level(s)	Suspicious Keywords	None detected
IP Address Usage	No (DNS Host)	Suspicious URL Structure	No (Canonical Structure)
TLD Abuse Rating	10% Risk (Standard TLD)	Shannon Entropy	4.32 bits (High Randomness)

4. WHY THIS RESULT WAS GIVEN

Main Factors Influencing Decision (5 Detected):
• Secure HTTPS Encryption: Operates over encrypted HTTPS protocol with standard transport security.
• Canonical Domain Structure: Clean domain hierarchy without deceptive subdomain stacking or hyphenated combosquatting.
• No Suspicious Keywords: Zero credential theft, spoofing, or authentication bait keywords detected.
• Standard URL Characteristics: Balanced character entropy and standard lexical length aligning with verified legitimate web domains.
• Established Top-Level Domain: Registered under a reputable, standard Top-Level Domain with standard DNS infrastructure.

5. EXPLAINABLE AI SUMMARY

Concise mathematical summary of the top 3–5 features from Explainable AI (SHAP & LIME) influencing the model's decision:

Rank	Influential Feature	Observed Value	Risk Impact Direction	Short Impact Explanation
#1	TLD Risk Factor	0.1	-Risk (Pushed Safe)	Reputation risk index based on Top-Level Domain registry abuse statistics.
#2	Suspicious Keywords Count	0	-Risk (Pushed Safe)	Occurrences of deceptive credential/financial phishing keywords.
#3	Subdomain Count	0	+Risk (Pushed Phishing)	Number of subdomains nested before root domain.
#4	HTTPS Protocol	1	-Risk (Pushed Safe)	Standard HTTPS encryption protocol detected.
#5	Path Length	23	-Risk (Pushed Safe)	Length of the directory and query path.

6. SECURITY RECOMMENDATION

■■ SAFE BROWSING DIRECTIVES (LOW RISK / LEGITIMATE DETECTED)

- The URL appears legitimate according to the current analysis: Structural, heuristic, and XAI indicators match safe web patterns.
- Continue using normal safe-browsing practices: Always confirm valid HTTPS lock indicators before logging in.
- Do not enter sensitive information unless the domain is verified: Ensure you intentionally navigated to this authentic destination.

7. SHORT SECURITY SUMMARY

URL:	https://www.google.com/search?q=cybersecurity	Risk:	LOW
Verdict:	LEGITIMATE	Confidence:	99.9% (Phishing: 0.1%)
Main Reason:	Clean lexical structure, verified HTTPS encryption, and standard domain hierarchy.	Recommended Action:	PROCEED SAFELY with standard browsing vigilance.
